LEGAL SERVICES
DIGITAL EDGE PLAYBOOK

Transforming legal services for a differentiated experience
ABOUT THIS PLAYBOOK

PURPOSE

This playbook outlines how legal services firms can transform their business architectures to help differentiate their offerings in an increasingly competitive environment. It shows them how leveraging private data exchange between firms, technology partners and consumers at the digital edge enables efficient and cost-effective legal service delivery. Finally, it explains how a globally distributed interconnection platform gives legal services firms access to rich digital ecosystems to compete and grow in the digital economy.

CHALLENGE

Legal services firms face new digital challenges and opportunities. Traditional law firm revenue is decreasing, while alternative legal services revenue has increased dramatically. Sophisticated and price-conscious consumers no longer need large law firms to handle standard legal tasks. They want the responsive, customized, digital experience, as well as the transparency and control, they've come to expect from other sectors. Traditional business architectures can't support the collaboration and data insights needed to meet these expectations.

NEED

Legal services leaders are decoupling the practice of law from legal service delivery to meet customer demand and promote trust. A distributed platform allows them to tailor value chains to create innovative new services that are adaptable to local needs. By interconnecting cloud services, NSPs and technology partners on a global platform, these firms can replace traditional, fee-based business models with outcome-based services in a new and profitable era of digital legal services.
## EXECUTIVE SUMMARY

Legal services firms need digital strategies to streamline value chains for an enhanced consumer experience.

### TRENDS AND INSIGHTS

<table>
<thead>
<tr>
<th>TRENDS</th>

**MARKET TRENDS**

Digital transformation is shifting revenue from traditional practice to digital services... ...while consumers demand greater transparency and control... ...requiring a distributed platform that integrates digital and industry ecosystems.

**Implications**

- Traditional legal firms must offer a new experience to remain competitive.
- Law firms must decouple legal services from the practice of law and develop new business models with outcome-based billing.

**Implications**

- Increasingly sophisticated and price-conscious consumers are demanding transparency and rapid delivery of standard legal services.
- Legal startups and innovative in-house counsel teams are stepping in to meet the demand for new capabilities.

**Summary**

The practice of law and the delivery of legal services have become separate entities, with paralegals aided by technology and automation to offer new capabilities. Data-based insights are replacing traditional consulting, while consumers demand outcome-based billing and a responsive experience. To compete, legal services firms are adopting a distributed interconnection platform that integrates digital and industry ecosystems, streamlines legal processes and adapts value chain architectures for a better customer experience.
**INTERCONNECTION INSIGHTS**

Interconnection Bandwidth* is projected to outpace growth of internet and MPLS traffic...  
...with business and professional services experiencing 65% year-over-year growth...  
...and growth compounding across cloud, financial and value chain ecosystems.

---

**Opportunity**

Interconnection, or the ability to privately exchange data between key business partners, is required for digital businesses to scale. Legal services firms can take advantage of this trend by distributing private traffic exchange and control points near supply chains, digital and business ecosystems, and customers.

**Summary**

Global Interconnection Bandwidth is expected to grow at 2x the rate of internet traffic as enterprises adopt interconnection for direct, secure data exchange. This compounding growth creates an opportunity for legal services firms to build exchange points near consumers, technology partners and service providers. The result is a digital platform of interconnected business and technology ecosystems that integrates AI, analytics and cloud capabilities for efficient delivery of legal services.

---

*Interconnection Bandwidth is the total capacity provisioned to privately and directly exchange traffic with a diverse set of counterparties and providers at distributed IT exchange points.*
CURRENT-STATE CONSTRAINTS

Traditional business architectures can’t meet changing consumer expectations for legal services delivery

1. Poor consumer experience
   Expectations for a digital experience are unmet

2. Traditional discovery
   Consultant-driven research is slow and expensive

3. Inefficient case processing
   Standard legal actions are treated as unique events

4. Slow iteration
   Complex process chains impede operational and business decisions

Summary

Traditional, centralized IT infrastructures inhibit collaboration with legal value chain partners and prevent the adoption of new technologies such as big data analytics and artificial intelligence. The result is a lack of transparency and an inability to use data-driven insights for improving the customer experience. To compete in the market, legal services firms must offer new delivery models that meet customer demand for choice, economy and access.

FUTURE-STATE CAPABILITIES

A distributed interconnection platform increases flexibility and delivers exceptional client experience.

1. **Transparent outcomes**
   Ability to provide legal action visibility and value-based outcomes

2. **Intelligent research**
   AI and analytics accelerate E-discovery and digital research

3. **Automated processing**
   Standard legal actions and document processing are automated

4. **Dynamic collaboration**
   Ability to quickly collaborate with clients and source changes

Summary

Business architectures built on an interconnection platform gain the ability to integrate value chains, enable ecosystem collaboration and provide transparency. Data captured and analyzed near business partners, consumers and service providers enables real-time insights that drive efficiency and reduce costs. The result is a digital legal services firm that is customer-centric and industry-leading.
Architecting for digital law requires an interconnection-first approach

Summary

Legal firms are being forced to provide greater end-to-end visibility into logistics and an enhanced consumer experience. They need to provide case visibility, simplify service delivery and offer timely intelligence to customers and technology partners.

Network, cloud, SaaS, content and other service providers enable new digital platforms and information exchanges by deploying services for legal firms at the digital edge in a highly scalable, pay-as-you-go model.

Managed services providers help legal firms architect interconnection options and integrate greater automation and business partner collaboration tools for rapid delivery of differentiated offerings.

Build a differentiated experience through interconnection
- Offer specialized legal services.
- Deliver a consistent and cost-effective experience.
- Establish a strategic global presence adjacent to business partners, consumers, data and service providers.

Reduce business risk with an interconnection platform
- Simplify and standardize service delivery on a single, global platform.
- Leverage ecosystems for strategic alliances.
- Rapidly test new markets and value-added solutions.

Scale through interconnected insights and ecosystems
- Harvest, process and exchange local legal action data.
- Provide timely intelligence to consumers, partners and providers.
- Dynamically adapt value chain to innovate legal services.
ROADMAP

Legal services digital transformation roadmap based on Interconnection Oriented Architecture (IOA) best practices

Summary

The business transformation roadmap shows legal services firms how to achieve a digital-ready business model for greater revenue growth. Follow the three-step plan to differentiate the experience for technology partners and consumers. Minimize business risk through automation and standardization, and enable scale through partner and service provider ecosystems. The result is an integrated interconnection platform that allows legal services firms to lead in the emerging digital legal services market.
To achieve the benefits of the strategy and the roadmap steps in this playbook, your architecture and platform require three critical elements: global location coverage, private interconnection with rich digital ecosystems and the capability to integrate, standardize and simplify control.

**Reach Everywhere**
- Global, metro cities and markets.
- Geographical compliance and sovereignty.
- Business operations and offices.

**Interconnect Everyone**
- Access network and cloud providers.
- Participate in ecosystems exchange.
- Leverage commoditized services.
- Share and exchange data.
- Transact using digital commerce.

**Integrate Everything**
- Marketplace of control functions.
- Cloud and managed services.
- Private data and distribution repositories.
- Globally standard policies.
- Business continuity and control.
- Digital commerce and payments.
