CLOUD DISASTER RECOVERY

Disaster recovery (DR) and high availability (HA) are often a source of major pain for infrastructure teams.

Running a second site for DR, buying additional storage, managing backups and performing DR/HA tests can be prohibitively costly in terms of CAPEX, OPEX, time, tools and other resources. Unfortunately, due to these resource issues, many organizations do not implement the robust DR/HA plan their business may demand.

Equinix Professional Services for Cloud (EPS Cloud) makes it easy to migrate all your DR/HA operations to the cloud, eliminating the need to maintain expensive “cold” DR sites. Plus, you can drastically reduce the costs of your overall DR/HA strategy. Our solutions create redundancy, so your company can protect itself from business downtime and lost data even when the worst happens.

Depending on your company’s requirements, EPS Cloud offers three powerful DR/HA cloud options:

- **Multi-Cloud:**
 - Leverage multiple cloud providers to create robust and flexible DR/HA coverage for all data center/cloud scenarios.
 - Seamlessly incorporate both Microsoft Azure and Amazon Web Services (AWS) via Equinix Cloud Exchange™, a multi-cloud “switchboard”. This enables superior DR/HA, globally.
- **Multi-Regional Cloud:** Extend your DR/HA footprint to multiple availability zones, or regions, using a single cloud provider
 - In Azure via regional VNET-to-VNET hot/cold DR sites
 - In AWS via regional VPC-to-VPC hot/cold DR sites
- **Hybrid-Solution:**
 - On-premises or in colocation data centers
 - Colocate DR between your on-premises data center and Equinix
 - Equinix cold DR and hot DR/HA

Cloud Disaster Recovery

Benefits of cloud disaster recovery

- **Speed:** Be “live” within minutes by bundling and copying your servers with the operating system, applications, patches and data.
- **Cost:** Implement a DR strategy at a fraction of the cost. Turn off your cloud until you need it, and keep the costs for duplicating your whole environment at a minimum.
- **Elasticity:** Your DR environment can easily scale as your IT grows without any need to purchase additional physical hardware or to delete unused files. You can achieve a global footprint for DR without the related costs of physical expansion.
- **Compliance:** Easily achieve compliance with the DR requirements of common regulatory data security standards.

About EPS Cloud

Equinix Professional Services for Cloud (EPS Cloud) provides enterprise hybrid cloud solutions and migration services, helping enterprise organizations adopt and integrate cloud technologies.

In partnership with cloud platform and product industry leaders, EPS Cloud delivers end-to-end capabilities to help enterprises build scalable, highly available, resilient, cost-efficient and secure interconnected cloud environments.

By continually providing superior hybrid cloud solutions to satisfy business objectives, simplifying IT management and meeting security and compliance requirements, EPS Cloud has become a trusted partner to CIOs of some of the world’s largest organizations.
