EQUINIX OFFICE 365 EXCHANGE ENABLEMENT SERVICES

Supercharge your enterprise's Office 365 performance with easy design and configuration

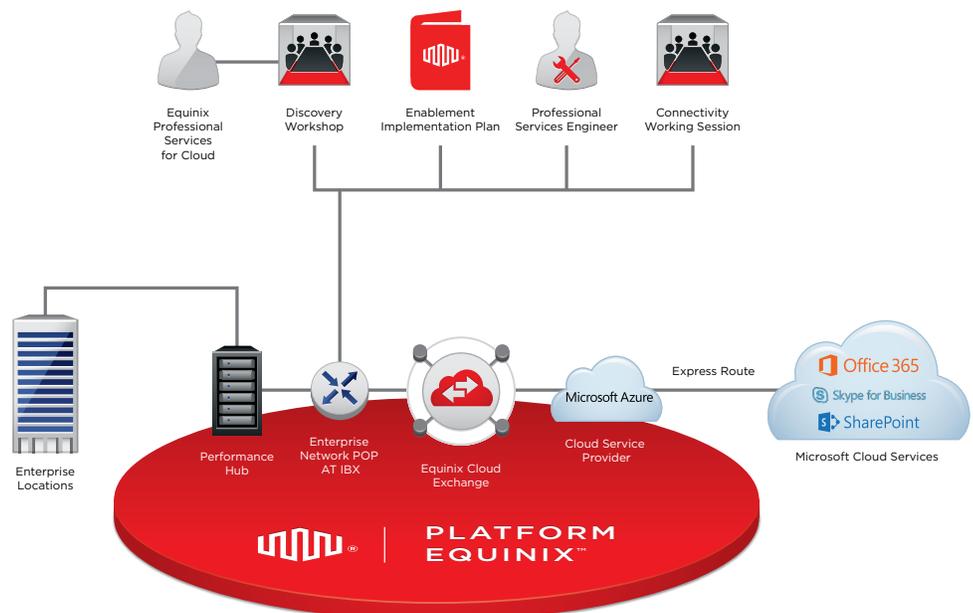

Office 365 has proven to be a resounding success globally, but implementing the application can be a tricky business. That's why Equinix Professional Services for Cloud (EPS Cloud), Microsoft's recommended U.S. systems integrator for ExpressRoute, offers our Office 365 Enablement services.

Available as either a bundled component of the Equinix Cloud Exchange™ (ECX) multi-cloud "switchboard" or as standalone services, Office 365 Enablement gets your company up and running on a private connection to Office 365 regardless of your infrastructure's complexity. The services are particularly beneficial for:

- Hybrid cloud scenarios, where your cloud environment will host some apps but not others
- If your company needs to solve for complex failover scenarios
- If your company has multiple data center/regional entry points to the Microsoft cloud

Office 365 Enablement services include:

- Conduct a review and planning session with your team to go over requirements, assumptions and implementation schedule
- Prepare a roadmap formalizing the tasks, timeline and other knowledge gained through the planning session
- Create required accounts and configuration on the cloud service provider (CSP) side (Azure, Office 365, etc.) as well as required cloud entities for networking such as VNET
- Complete all cloud and Equinix International Business Exchange™ (IBX®) data center-side configuration that can be done pre-connection, such as Cloud Exchange provisioning, Azure-side "PowerShell" circuit and peering, and more
- Working session to configure connectivity including VLAN, Cloud Exchange configuration, BGP and NAT
- Assist your team in validating application functionality (Skype for Business, SharePoint, etc.)

Project deliverables include:

- Office 365/ExpressRoute architecture and design document
- Functional private connection over Cloud Exchange from one IBX location to cloud-based Office 365. Services to be connected can include Office, SharePoint and Skype for Business
