

# REALIZE THE FULL BENEFITS OF HYBRID IT WITH EQUINIX AND AWS

Equinix Cloud Exchange directly connects your private IT infrastructure to AWS

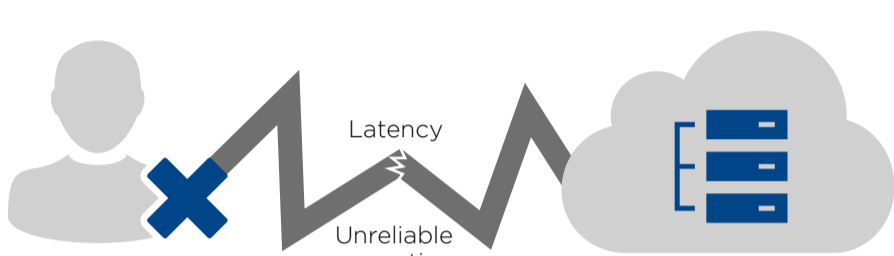

- Reliable
- Instant
- Direct
- Scalable
- Flexible

Together Equinix and AWS can help you overcome the challenges of achieving interconnectivity

In today's interconnected era, where cloud dominates and enterprise models are interdependent, interconnecting with AWS means negotiating challenges that include:

## Poor user experience

**89%** of enterprises say poor app performance has negatively impacted work<sup>1</sup>

## Increased complexity

**71%** of enterprises have hybrid infrastructure<sup>2</sup>

## Greater risk

**70%** of executives see security as biggest issue in migrating to cloud<sup>3</sup>

Equinix enables full integration between cloud services and demanding internal applications

### Predictable performance

- Dedicated network link reduces reliance on the public Internet
- Direct edge connections are closer to employees, partners and data

- Lower latency performance
- More consistent network experience

### Enhanced compliance

- Private connection to AWS bypasses public Internet
- Data control and compliance features

- Private data access for heavy-compute, low-latency workloads
- Improved regulatory and compliance readiness

### Hybrid cloud enablement

- Easily-enabled: new hybrid cloud architectures
- Sensitive data maintained within Equinix close to AWS

- Equinix Cloud Exchange's simplified management
- AWS' flexibility, scalability and cost-savings and multiple networks

The elements of advanced interconnectivity

### Equinix Cloud Exchange™

Private, direct network connectivity to AWS Cloud Services.

### Equinix IBX™ Data Centers

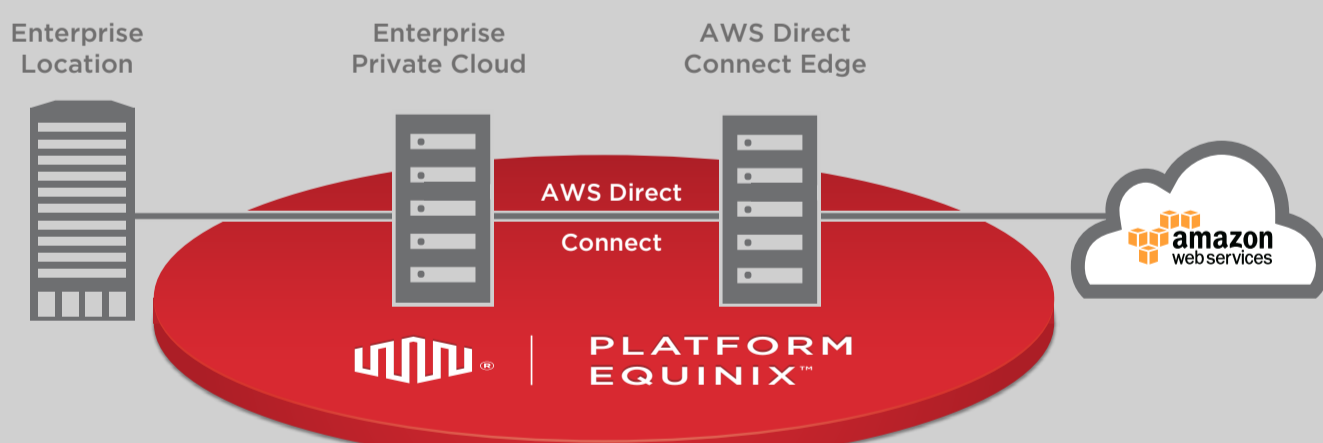

Carrier-neutral colocation space and carrier-dense interconnections.

### AWS Direct Connect

Directly connects IT infrastructure to AWS bypassing the public Internet.

### Equinix Performance Hub

Deploy resources at the edge for new global network performance.

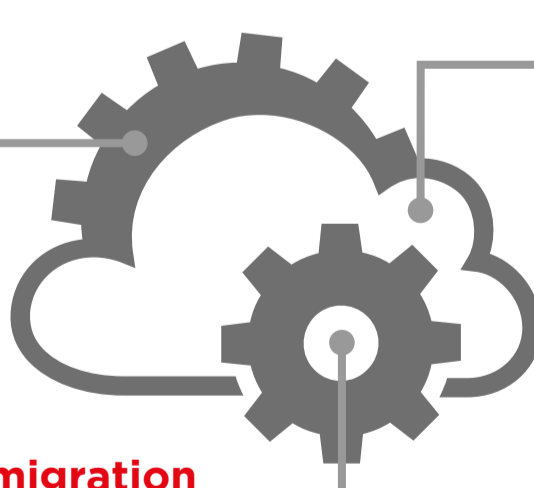

Equinix | AWS deployment scenarios

### Hybrid cloud

Treat AWS instances as part of your data center LAN

### Data migration

Move large volumes of data faster, more securely, and at a lower cost

### Back up & recovery

Data replication to deliver business continuity, disaster recovery and data retention requirements

Coverage that connects you everywhere
